People in our group are constantly querying the content in a cross-platform.. One of the VMs from my previous post is still running that operating system.To get started, you will need to set up your Twitch account and log in. When you have successfully connected, you will be returned to the Dashboard to create your game. Click on the Create a New Game button, as shown below. With your Twitch channel selected, choose your game's name. The game's name will always appear after the two pound signs (#) on the right side of the "Add Game" page, as shown below. The page will then ask you which game you want to add. Choose between "Streaming", "Gameplay", or "Webpage". A description of each of the three game types can be found here. The name of your game will be the name that is displayed in the URL of your game page on Twitch. Click the "Next" button to continue. The Game Dashboard page will now be displayed, as shown below. This page is the home of your game on Twitch and will guide you through the functions of the game itself. The left sidebar is a direct link to your game's profile on the game page, where you can view your channel, watch history, and manage your settings. The center area of the Dashboard contains a toggle for "Play", which will start your game when the button is clicked. You can also toggle your game between public and private play in the upper right of the screen. The default setting is "Public" and allows anyone with a Twitch account to view your game. The "Settings" button on the left of the screen opens a menu where you can manage your stream. You can toggle up and down to select your resolution. The "Status" button in the upper right of the screen will show your game's status within Twitch. You can see who has been watching your game and when they were last active. The "DASH" button to the right of
