The AutoCAD command-line compiler is used to compile C code files into object files. These object files can then be linked with the AutoLISP or Visual LISP compiler. AutoLISP also has a command-line compiler, which can compile C code into AutoLISP, so that AutoLISP programs can be easily built into executable binaries. AutoCAD may be used for software and hardware development. Autodesk provides a free CodeWarrior Edition of AutoCAD 2010, 2010R2, 2012 and 2013. It is a cross-platform development tool for both C++ and C# for the .NET Framework. Autodesk also provides a trial version of ObjectARX Studio, a GUI for the AutoCAD programming tool. Since 2007, there is a build of AutoCAD used for open source projects. The autocad-ng project aims to compile a free version of Autocad for Unix. It is similar to AutoCAD 2D-2012 and does not contain the 3D component. History AutoCAD originated at the Massachusetts Institute of Technology in 1985 as MicroStation, an IBM product developed by GE. It ran on the SPARC minicomputer platform. Although originally an office graphics application, it was eventually reengineered to make the AutoCAD application a true CAD system. It started with its first major version, 1.0, in 1990, and currently, the last version (AutoCAD 2016) was released on July 16, 2016. AutoCAD is the flagship product of Autodesk. On August 1, 2018, Autodesk announced a strategic partnership with Microsoft. Autodesk will integrate AutoCAD with the Microsoft Office 365 software, allowing its users to access documents from AutoCAD, collaborate and manage files through the cloud. Use AutoCAD is most often used to create architectural and engineering drawings. In addition to technical drawings, AutoCAD can create blueprints, schematics, cut sheets, elevation cuts, block prints, fabrication sheets, and many other drawings. Along with features for architectural drafting, AutoCAD also has features for mechanical, electrical, plumbing and heating/air-conditioning (HVAC) design. For example, a project engineer may use AutoCAD to create geometry and then load a file of pipe cross sections from Excel to generate a welded steel pipe component. From the software, the engineer can af5ca3d97

Blaine's 4th of July Parade Blaine's 4th of July Parade is a series of parades held every year in Blaine, Minnesota, United States. The first parade was held in 1922, after World War I, when soldiers returning home from the war were honored. The parade is considered to be among the first of its kind. History Blaine's 4th of July Parade has been held annually in the city of Blaine since 1922. The parade has undergone several different formats since its inception. From the original parade to the current (28th), Blaine's parade has been held every year except for World War II, 1969, and the 1975 parade. Blaine's parade has not been held in May or November because these months are usually considered by parade organizers as "peak" months for attendance. As an outgrowth of the 4th of July celebration, it was not uncommon for Blaine's parade to attract hundreds of thousands of spectators. Blaine's 4th of July Parade is considered one of the largest and longest running holiday parades in Minnesota. The parade in 2014 is expected to attract more than 100,000 spectators. Parade format The parade now starts at 10 a.m. on Hwy. 10, three blocks north of the corner of Market and Blaine Ave. and goes west on Hwy. 10 and continues to the parade start/finish line at the intersection of Blaine Ave. and South Mall Drive. The parade will return to Hwy. 10 at the sign for the First National Bank Plaza and continue west to the parade start/finish line. The main course will head north from the finish line to the auditorium. Chaplin's music and entertainment start at 9:45 a.m. with the main course of parade starting at 10 a.m. In prior years, the parade had a very strict dress code. In 2016, a shorter-sleeved shirt and collar was the only required attire. The Blaine Area High School Band and Color Guard will lead the parade in 2016 and will also lead the parade in every 4th of July Parade. The Blaine High School Drumline will also be in the parade and will also be in every 4th of July Parade. The parade will be followed by a carnival and fireworks. Markup import Use the same colors in your document that you use in your CAD drawings. Accurately identify and mark up printed text and comments in your CAD drawings, and save time while you're marking up your CAD drawings. (video: 1:30 min.) Markup assist Highlight important design information in your drawing using visible visual cues. See where text or image annotations appear in your CAD drawings, and automatically incorporate those locations into the design. Echoing and Protractor Scribe the perimeter of 3D drawings by importing the drawing, rather than drawing the perimeter yourself. (video: 1:31 min.) Scribe a CAD drawing with the perimeter specified in your drawing Simplified Design Zones: Save time when designing by quickly highlighting a zone and inserting a predefined region in the drawing. (video: 1:27 min.) Create a custom zone or region in seconds Add Wall, Finish, and Cut Planes to your models: Add layers to your drawing that you can apply to models, so you can instantly create region-specific wall finishes, cutting and routing planes. (video: 1:30 min.) Extend your models' features into their wall and finish Apply 3D Model to Model: Use the drawing's Reference Point tool to easily define the origin of your models. (video: 1:30 min.) Precisely define the origin of a 3D model Use the ability to view multiple views of the design in different sections at the same time, and efficiently mark off and edit each view, layer by layer. (video: 1:33 min.) View multiple views of a model in multiple sections Preliminary Design and Modeling: Export symbols to a DXF file that you can use to import into other CAD software, or to print designs. (video: 1:25 min.) Preliminary Design and Modeling Use the Ribbon to create sections and divisions within your drawing, and mark out guides, dimensions, and other symbols. (video: 1:31 min.) Create sections and divide your drawing into different zones Work with data in your drawings by adding and managing attributes. Attribute data lets you tag elements in a drawing or modify their attributes on the fly. (video: 1:40
