And now, it's time for me to tell you about what is the most interesting thing in the Photoshop. As I continued, the interface became a bit cluttered with app icons, and since I had to scroll around in circles to get to those, I am sure others will find it the same. The old version had a very good workflow, which allowed me to control exposure, white balance, and focus, had automatic progress reporting, multiple toolbars, and a few advanced settings. In the new version, I will not get to use the exposure tool and the Adjustment panel have changed in these ways:

- The red slider has been replaced by a progress bar, which is color-coded to show you what you have accomplished and what you are missing. I also found a new Scale Control panel, which allows you to create custom scales (1:1, 2:1, etc.)
- Adobe has moved the Ramp, mask tools, and lens corrections to the "History" panel. In the old version, they were in different panels near the letters "B" and "L". In 2021, the Ramp tool is in its own tool, as is the Masking panel.

One of the most iconic features of Photoshop is that it is used for editing images on computers, tablets and smartphones. Now, for the first time, importing and exporting are highly integrated into Photoshop. It is all about enabling Photoshop to work across your devices. With these new features, you can easily save web images from a browser and work on them directly in Photoshop, just like you can save and re-open documents in Office,” said Russell Brown, senior director of product management at Adobe. “Having the flexibility to work on images wherever you are is what makes workspaces so powerful. One of the best things about Accessibility is that it can work across devices, time and location. Then you can open a file or a workflow and get to work whether you’re on your computer at home or your laptop in the office.” Historically, Photoshop has been a powerful, yet complex app for digital artists. Today, the changes we’ve made allow Photoshop to feel like a more efficient and powerful suite of interactive tools. Our team of product managers and engineers has been working on these new features for a while, and we’ve been listening and evaluating feedback from the community to ensure that they are simple to use and also improve performance and help customers get to the features faster. Quickly erasing or duplicating an image, resizing a web image or swapping background colors are all things that can now be done with one click. The Delete and Fill command is one of these features, but it has been improved to be even more powerful.
